

VRS Project #AS03

On behalf of COLORIFICIO MP Srl, Virology Research Services Limited (Company Number, 11718460) has tested the virucidal activity of Purifica+ against human coronavirus NL63.

The research was conducted strictly following the protocol for ISO21702:2019.  
This work was performed in the VRS London labs in March 2021.

Under the conditions tested, Purifica+ has a virucidal activity against human coronavirus NL63 at a contact time of 15 min. The experimental protocol and its findings are described in detail in the attached report.

At 15 min, the average recovered titre for Purifica+ was  $8.86E+00 \pm 4.67E+00$  TCID50/cm<sup>2</sup> compared to  $1.48E+04 \pm 7.54E+03$  TCID50/cm<sup>2</sup> for the reference control material.

R (antiviral activity) = 3.22 at 15 min.

The above data indicate that Purifica+ inactivates > 99.9% of virus after 15 min of contact relative to the reference control.
